Conjugate Quadrivalent Meningococcal Vaccine

Part A

Prescriber Criteria: Consultant Microbiologist
Consultant Hospital Infection Control

Inpatient use:
For the protection of MDH laboratory staff handling live meningococcal cultures.

Part B

Prescriber Criteria: Consultant

Indications as per National Immunisation Service:

- Travellers going to endemic areas on Government business
- Missionaries travelling to endemic areas
- Immunocompromised patients on the advice of their consultants
- Close contacts of confirmed cases as advised by Public Health Consultants, A & E Consultants, Infection Control Consultants or Infectious Disease Consultants

Part C

Prescriber Criteria: Consultant

Inpatient use:

- Patients with asplenia or undergoing splenectomy.
- Patients undergoing bone marrow or stem cell transplant.

(The conjugate quadrivalent meningococcal vaccine is also part of the National immunisation Schedule. This protocol does not apply when this vaccine is given for active immunisation of children as part of the National Immunisation Schedule.)
