Fosfomycin 3g Granules for Oral Solution

Prescriber Criteria: Mater Dei Hospital Antibiotic Team Consultant
Consultant Urologist

Inpatient use:
Fosfomycin is reserved for the treatment of the following infections which are caused by multiple drug resistant Gram-negative bacteria that are susceptible to fosfomycin:

- Uncomplicated and complicated urinary tract infections
- Prostatitis
- Prophylaxis for prostate biopsies

A Microbiology report should confirm the growth of an organism susceptible to fosfomycin, whilst being resistant to first and second line agents.
